Uniforms Management Software

Innovative Software Solutions CC

Introduction:

Simplify Uniforms Management System was developed and designed for the purpose of streamlining and simplifying the issuing of uniforms to employees. Taking the complex task of uniform stock control and change it into a simple and flexible task.

Options such as custom costing rules to indicate what portion of the price, the company and the employee is liable for, as well as flexible SQL reporting, full audit trail and easy data input /output options.

A user-friendly UI ensures that navigation is done quickly and efficiently.

The system offers a seamless integration with D-BIT Payroll.

3rd party integrations are possible, as the backbone of the system is running on .NET Framework and houses the data in a general MS SQL database.

Functionality:

- Encrypted passwords
  - Encrypted user passwords in the database to ensure passwords are not leaked.
- Custom Costing rules
  - Custom costing rules to indicate the cost split between employee & employer.
- Customizable SQL reporting
  - Full SQL reporting for easy & accurate data extracts.
- Full audit trail on database
  - Full audit trail on all tables for all inserts, updates & deletes done via the application or in the SQL Management studio.
- Full audit trail on user access
  - Logs kept each time a user logs in/out of the application as well as unauthorized attempts.
- User initiated SQL backups
  - Users can initiate SQL backups before major data changes/month ends to ensure incremental backups are done. Data restores can only be done via SQL Management Studio.
- Direct database scripting
  - Direct scripting against the database for quick updates & select statements.
- Data Import functionality
  - Easy data import to tables with .csv files.
- Custom lookup fields for Classifications/Categories
  - Custom lookup fields for classifications & categories to eliminate data inconsistency.
- Exception Query Reporting
  - Query reporting for supervision of processing queries for loading & issuing uniform items.

Innovative Software Solutions CC

- Custom Rules include:
    - Low stock notifications
    - Minimum stock settings
    - Re-issue of stock prevention/warnings
    - Automated Item Codes
    - Automated pricing average
    - Last item price check with factor % variables.

Security Settings:

- User password complexity
- Password minimum length
- Incorrect password lockout attempts
- Password/user account expiration
- Custom permission templates on module level

General:

- 3rd Party Application Integration
- Integration from D-BIT Payroll system via ODBC DSN for new/bulk employees load.
- Easy exports of all data grids with "Copy to Clipboard"
- Data Export functionality per data table

Modules:

- Stores / Departments
- Customers Module
- Suppliers Module
- Employee Module
- Procurement / Order Module
- Stock Count Module
- Reporting Module

Transactions:

- Stock Counts
- Purchase Orders
- Order/GRV Processing
- Credit note Processing
- Maintain Products
- Transfer Products
- Product Images
- Issue Uniforms to employees
- Uniform Returns
- Maintain issued Uniform records
